Client Name _____ Pet Name _____ Date _____

Wellness Service Consent Form

Please read below carefully and initial indicating you have read and agree with each one statement.

- ____ I understand that the San Antonio Humane Society (SAHS) offers preventative services only.
- ____ I understand that the veterinarian or animal health technician examining the pet will refer me to a full-service veterinary clinic for *any* additional services the pet may require outside the scope of the SAHS Wellness Clinics.
- ____ I understand that the veterinarians and animal health technicians of the SAHS may refuse to provide services to the pet if they feel the pet's health will be compromised, or if the pet poses a danger to itself or to others.
- ____ I understand that any vaccine or injection administered has a risk of causing a reaction (local or systemic) even if the pet is healthy. I understand that the SAHS veterinarians nor its staff are liable for vaccine reactions that may occur.

Texas Health and Safety Code 828.012. b. requires the San Antonio Humane Society (SAHS) to verify and document the following information in order for our veterinarians to provide services to the general public.

I certify that I qualify for wellness services according to the following criteria (please check all that apply):

- I receive government assistance.
- My gross annual household income is less than \$21,000.
- I am otherwise unable to afford preventative veterinary services for my pet.

Signature _____ Date _____

Client Name _____ Pet Name _____ Date _____

Vaccine Reactions

Every vaccine stimulates the immune system to be effective. Sometimes vaccines over-stimulate the immune system causing the body to react negatively to the vaccine or its components. This over-stimulation can cause a vaccine reaction. The veterinarians at the SAHS would like you to know what symptoms to possibly expect after your pet receives a vaccination.

COMMON SYMPTOMS:

Normal responses to vaccines (symptoms should only last 24-48 hours)

- Low-grade fever (less than 103°F)
- Mild soreness at the sight of vaccine injection
- General soreness

If any of these symptoms last longer than 48 hours, please see your primary care veterinarian.

OCCASSIONAL SYMPTOMS:

Mild to moderate vaccine reactions (usually occur within the first 24 hours after vaccination)

- Facial swelling or hives on the body
- Vomiting and/or diarrhea
- Severe lethargy (drowsiness)
- Abnormal discomfort or soreness

UNCOMMON/RARE SYMPTOMS:

Severe vaccine reactions (usually occur immediately after vaccination)

- Collapse
- Shock
- Difficulty breathing

If your pet has previously suffered a severe reaction to a vaccine, you must have your pet vaccinated at a full-service veterinary clinic. The San Antonio Humane Society is not equipped to treat severe vaccine reactions.

Our wellness clinics are designed to provide streamlined service for healthy pets in need of regular immunizations and preventative care. A pet with a vaccination reaction history requires special attention by observation in a veterinary hospital and pre-treatment with medications prior to being vaccinated. **If your pet has a severe reaction, our veterinarians are legally authorized to provide basic life support treatment only.** Your primary care veterinarian must administer any additional care at a full-service veterinary clinic.

By signing below, you indicate that you have fully read and understand the above information on vaccine reactions.

Heartworms are spread by mosquitos. It is essential to keep your dog on monthly heartworm prevention to prevent this deadly disease. Give your pets monthly heartworm, flea, and tick prevention for their best health! Remember to spay/neuter your pets!

Puppy and Kitten Packages: Puppies over the age of 15 weeks are not eligible for these packages. Boosters are recommended to be administered every 3-4 weeks until the pet has received a total of three boosters. We recommend all large breed puppies be vaccinated every 3-4 weeks until the pet is six months of age.

Client Name _____ Pet Name _____ Date _____

Vaccinations and Services

Please check the vaccinations and/or services you request for your pet. Depending on your pet's health evaluation, he/she may or may not qualify for the requested vaccinations/services. If you have any questions please consult your Animal Health Technician.

Client Name _____ Pet Name _____ Date _____

Medical Record Pre-Exam Questionnaire

For every patient seen, the technician should ask the following questions. The answers will help determine what is in the best interest for the pet.

General

- Y N** Eating/drinking well?
Y N Vomiting and/or diarrhea?
Y N Coughing and/or sneezing?
If yes, how often? Are there any allergies, and are they seasonal (spring/summer)?
Y N Has the pet ever had a vaccine reaction?

Heartworm Prevention

- Y N** Is the pet on heartworm prevention?
If no, when was the last dose given, if ever?

Discuss heartworm test and prevention.

Flea/Tick Prevention

- Y N** Is the pet on flea/tick medication?
Y N Does the owner see a lot of ticks on the pet?
If yes, recommend the 4DX heartworm test to test for tick-borne diseases.
Make sure to recommend Nexgard. Advantage Multi and Revolution do not prevent ticks.

Bordetella Vaccination

- Y N** Does the pet go to the groomers, a boarding facility, or the dog park?
If yes, discuss the Bordetella vaccine and have the owner consider it.
Y N Has the pet received a Bordetella vaccine before?
If yes, when was the last vaccine administered?
Recommend the vaccine every 6-12 months, dependent upon visit frequency to the groomers, boarding facility, dog park, etc.

Puppies/Kittens

- When did the person acquire the pet?
Where did the person get the pet from (friend, breeder, shelter, etc.)?
Y N Has the pet ever received any vaccinations, including from the previous owner?
If yes, when and what was the last vaccine?
What is the pet being fed and how often?
When was the last time the pet ate?

Please inform clients that all puppies need to be kept indoors until fully vaccinated at 4-5 months of age.
The pet needs at least 3 or 4 DAPP vaccinations and 1 rabies vaccination at 4 months of age.
